Note (for the cited literature, see the List of Cited Literature)

- Claims 1-14
- Cited literature 1-4
- Remarks

Cited Literature 1 (especially Claim 4 and paragraph 0051) describes a voice data transmission and reception scheme whereby voice data is split into clause units, packetized, and transmitted.

Cited Literature 2 (especially Claim 1 and paragraph 0008) describes combining and transmitting a plurality of voice data in single packet.

Cited Literature 3 (especially Claims 6 through 8 and paragraphs 0006 and 0024) describes filtering voice data and forwarding it via FTP, as well as selecting the optimal communication scheme from among a plurality of communication schemes according to the communication conditions.

Cited Literature 4 (especially Claim 1) describes transmitting voice data with identification information appended thereto in order to distinguish it from other data.

Furthermore, what sort of recognition means should be used for recognizing clauses of the voice data described in Cited Literature 1 does not go beyond a matter which can be selected as appropriate by a person skilled in the art (see for example Japanese Unexamined Patent Application Publication H9-120295, Japanese Unexamined Patent Application Publication H7-272447, Japanese Unexamined Patent Application Publication H3-38699 and Japanese Unexamined Patent Application Publication H10-97280).
